

DURALUXE'S ANTIMICROBIAL PANELS

Duraluxe: The Importance of Sublimatable Antimicrobial Panels

I want to take a moment to communicate to everyone about the importance of the use of Antimicrobial Duraluxe Panels. They do not have antiviral properties.

First of all the Antimicrobial Duraluxe Panels are not new. In fact, our parent company Decoral developed the antimicrobial powder in 2007. In the past years we sold the antimicrobial panels mainly to cruise lines for use in their food courts because they were very concerned about the spreading of germs and bacteria among their passengers. For over 13 years Duraluxe Antimicrobial Panels have prevented the spread of bacteria in public spaces by eliminating 99.9% of the microbial presence (not to be intended as to have ANY antiviral efficacy or properties) on the Antimicrobial Duraluxe panels in a few hours without the need of applying chemical cleaning.

Duraluxe panels can be sublimated with any design and can be used for school hallways, office walls, bathroom walls, kitchen walls, restaurant walls, hospital walls, back splash, bathroom floors, shower walls, ceilings, partitions, restaurant tables and chairs and many other uses.

Remember, in addition to the antimicrobial protection, Duraluxe panels provide protection against graffiti, scratches, chipping and UV. Also, Duraluxe is the only bendable sublimation panel. Discover the difference!

Order Duraluxe Antimicrobial Panels today by emailing: richard@duraluxepanels.com

Stay Safe Everyone!
